

## New Products Displayed at the AHR Expo

**Spinnaker Industries** ([www.spinnakerindustries.com](http://www.spinnakerindustries.com)) introduced the SPOAU Series packaged 100 percent outside air systems. The systems include modulating DX, chilled water, or heat pump cooling options. Quiet scroll-type compressors are mounted in isolated compartments, making them easy to service while the unit is running. Features include hinged and gasketed access doors, a single power point connection, DWDI FC centrifugal blowers, high-efficiency TEFC motors, and adjustable V-belt drives. Evaporator and condenser coils have internally enhanced copper tubes with aluminum fins. Applications include fitness clubs, where it is necessary to constantly remove moisture from the indoor air.
